633 tributary area does not extend beyond the state, it does include the coffee and cacao areas, parts of the São Francisco basin, and the sertão of Bahia. It is the focus of transportation and communication, of finance and administration, and of foreign trade for the entire state. Despite the economic, political, and social pre-eminence of Salvador, a few cities operate quasi-independently in a particular function, notably Ilhéus and Itabuna, in the cacao area.

The next largest cities in the Recôncavo--Feira de Santana and Alagoinhas--are much alike in size, location, and function. Feira de [K2] Santana--often called merely Feira--with 26,559 people in 1950, was the second largest city of the Recôncavo and of the state. It is the [543] cite of one of the most famous cattle fairs in Brazil.[33] Alagoinhas is smaller--21,289 people in 1950--and less notable historically. It is the third largest city of the Recôncavo and the fifth largest of the state. One of the common functions of both these cities is trans- 633 portation. Feira is the railhead of railroads from Salvador and from 494 Cachoeira and is the junction of the Transnordestina trunk highway 496 which crosses the northeast interior of Brazil, with a highway to Salvador and with the only highway from Bahia to Rio de Janeiro. Alagoinhas is the junction where the railraod (Leste) to Senhor do Bonfim and Juàzeiro--on the Rio São Francisco--branches from the main line from Salvador to Maceió, the capital of the state of Alagoas. Just outside Alagoinhas are the main railroad shops of the Leste line 633 (Viação Férrea Federal Leste Brasileiro). The position of these cities, 369 intermediate between the Recôncavo and the sertão, is reflected in 291 the appearance of the people who are met on their streets--dark 142 Recôncavo agriculturalists in straw hats, patched khaki trousers, and wooden clogs and mestiço vaquéiros (cowboys) from the sertão in 633 495 their leather hats and vests. Each has a number of postos (garages) 161

mers. However, on almost every plantation there are brick-lined springs from which the inhabitants get their drinking water. Women or children carrying five-gallon cans of water on their heads, and donkeys carrying four wooden kegs of water, are common sights along the roads of the Recôncavo. For the cattle and other livestock of the plantations, drinking places are excavated wherever there promises to be enough water. Frequently, however, these go dry in the summer, especially during the drought years which occur cyclically in rhythm with the droughts of the sertão. At such times loss of cattle is prevalent, except on plantations situated near one of the small rivers.

A high-voltage electric line passes through this section leading from the generating station further inland to the capital city. Recently most of the plantations have been able to connect with this line, so that at least the owners' houses have electric light. The houses of the workers are without it except at the factory, where the mill supplies its own electric power which is carried to almost all the workers' houses.

There are four state schools and one county school distributed among the plantations. The central school in the town of Vila Recôncavo is not attended by children from the plantations. Two plantations have their own chapels, which are visited at irregular intervals by the priests of Vila Recôncavo. On the other plantations a small altar is set up in the owner's house for special occasions such as Christmas, when the town priest is invited to celebrate the Mass.

There is in the town a medical post with a visiting doctor, a dentist, and several nurses in training, which is administered by a Franciscan lay brother and supported by federal, state, and county funds and by private donations. This post is fairly recent, and its influences are spreading only slowly to the rural area. Also in the town is a small county medical post run by a resident physician. The sugar factory has a dispensary with a nurse and is visited by the town doctor. Almost every plantation has its own first-aid equipment, generally in the owner's house.

There are no fairs in the community. There are stores in the town and a large supply store at the factory, run by the corporation, and nearly every plantation has its own small store. Major purchases are made at the weekly market in Centro, in the neighboring county. There are also traveling ped-
